

High Capacity Trolley – Ramp

This device makes the HCT a more flexible delivery solution by enabling full HCT's to be loaded to a specially adapted vehicle. Instead of being restricted to deliveries close by the Delivery Office, HCT's can be deployed several miles away where the terrain and delivery characteristics allow it to be safely and efficiently utilized.

Once the trolley is pushed up the ramp (by two people) it can be safely secured using specially designed retention straps and driven to its delivery location. OPG's whom uses this equipment must be specially trained in its safe use.
